# Hedlund's Glass House

The main floor of this Contemporary home was designed with one purpose in mind; connect the outdoors with the indoors. The lake-facing exterior wall on the main level is constructed almost entirely of glass. Not only does it offer fabulous views, an airy, near-outdoors feel, but two thirds of this glass wall slides open, allowing guests to step from the grand room to the patio, almost without realizing. And on the patio one finds an entire living room set to lounge in, a large, custom built dining table, and a gas fire pit - all the luxuries of home in the fresh Idaho air.

Whether you're sharing a relaxing moment with friends or family, loosening up some sore muscles, or simply enjoying the ambiance created by the LED lights, we can all agree with Dave Priano; "Hot tubs are therapeutic," he says. "They make people happy – therapy for body and mind."

## >> Spring of Beauty

Too large to be a hot tub/spa, and too small to be a pool; this custom “spool” was designed with kids and adults in mind, allowing plenty of room for everyone to have some personal space. Both natural basalt rocks and artistically formed concrete boulders surround the spool, offering an aura of seclusion one can appreciate when taking time to relax. Add to that a beautifully designed waterfall, and you’ll simply fall in love with the truly organic feel that’s created. And, of course, both the LED lights in the spool, and the night lighting surrounding it, make it the ultimate location to relax or entertain.

## >> Waterfall Wonder

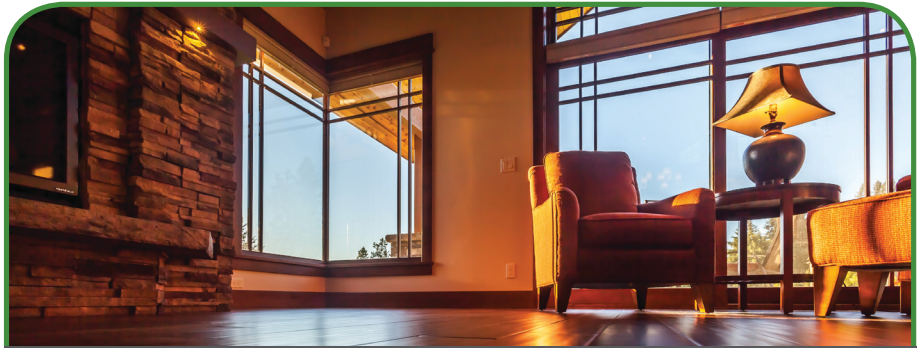

Located at the base of an octagonal castle-like turret and a breastwork of stack stonework, this hot tub could easily make one feel like royalty. The process of making it match the angles and timeless aura of the home was no small project. The fiberglass shell was completely custom designed and molded to fit the home’s architecture and the space provided. It’s large enough for family and guests, has its own waterfall, offers a grand view of Lake Coeur d’Alene, and is conveniently located between the home and waterfront; perfect for warming up on the way back from a dip in the lake.

## Our main objectives are customer service and quality work.

### OUR CUSTOMERS NEEDS

**COME FIRST.** We use brass and copper materials for the longevity and reliability of our systems. The pumps we install are the highest rated for durability.

- Complete Well Systems
- Ultra Violet / Filtration
- Lake Systems
- Well Testing
- Septic / Sewage Pump Systems
- Licensed Installers
- Locally Owned & Operated
- FREE Estimates
